

HIGH TUNNEL GROWING: AN INTRODUCTION

Learn How to Make Money Growing in High Tunnel Greenhouses

High Tunnels High Profits FREE WEBINARS

Brought to you by  **J.R. Johnson Supply**
Growing with you for nearly a century

Featured speaker Terrance T. Nennich, Extension Professor
Vegetable & Small Fruit Production
University of Minnesota Extension Service

For the past nine years, Terry has lead the University of Minnesota high tunnel research and development team. He is co-author of the 'Minnesota High Tunnel Production Manual for Commercial Growers'.

Dates

JUN 24, 7 PM

JUL 15, 7 PM

SEP 9, 7 PM

Presentation Focus

Intro to high tunnel greenhouses. Why high tunnel can mean high profits.

High Tunnel Structures and Accessories

How to grow in and market your high tunnel crop.

Webinars will run 45 minutes followed by a Q&A period. Questions in advance are appreciated. Please send emails to info@jrjohnson.com.

High Tunnels are inexpensive large greenhouses that are built directly on the ground and do not require footings. They rely on passive solar energy to provide heat and the durable plastic covering protects plants from inclement weather conditions that typically damage field crops.

Using high tunnels can extend growing seasons by 4 - 8 weeks in the spring and 2 -5 weeks in the fall. This means growers can get an additional crop and enhanced yields in the upper Midwest regions of the United States. A longer growing season and higher yields means higher profits.
